

State Family Planning Waiver Evaluation Indicators

Evaluation Indicators/Topics	States
Utilization	
1. Assess number and percentage of eligible women/men (including subgroups) who are enrolled in the waiver	SC, AL, IL, LA, AR, NC
2. Assess number and percentage of enrolled women/men (including subgroups) who participate in the waiver	SC, AL, IL, LA, AR, TX, VA, NC
3. Assess impact on the number of males receiving family planning services through Medicaid.	VA
Access	
4. Qualitatively assess the outreach efforts of agencies involved in waiver outreach	SC, AR
5. Assess barriers to enrollment and participation	SC, AL, VA, NC
6. Assess the number of private providers who provide family planning waiver services	SC, AL, AR
7. Assess the percentage of services provided by private providers as a percent of all family planning waiver services	SC, AL
8. Assess the number of clients receiving privately provided family planning services	SC, AL
9. Qualitatively assess how outreach efforts have penetrated to private providers.	SC
10. Assess number and percent of providers enrolled in Medicaid rendering FP services to waiver participants.	LA
11. Identify provider characteristics associated with privately rendered FPW services	SC
12. Identify barriers affecting clients or providers which limit the amount of privately provided family planning services.	SC, AR, VA
13. Assess primary care referrals and the outcomes of those referrals	SC, AL, IL, LA, AR, VA, NC
14. Assess the number of FPW participants who receive family planning services through Federally Qualified Health Centers (FQHCs)	SC, VA
15. Assess the number of FPW participants who use FQHCs for primary care	SC
16. Qualitatively assess enrollees' awareness of the program, source of information and use of family planning services	AL, VA
17. Compare number of women receiving services to number of women of child-bearing age (by region of state)	AR
18. Qualitatively assess providers and potential providers' familiarity with the program.	VA

Evaluation Indicators/Topics	States
Financing	
19. Calculate budget neutrality based on the revised methodology contained in the terms and conditions	SC, IL, AR, TX, VA
20. Analyze per capita expenditures for waiver participants over time as compared to the Medical Consumer Price Index (MCPI)	SC, AR
21. Monitor the effect of the waiver on the Title X program.	SC, IL, AR, NC
22. Assess the ratio of Medicaid per capita expenditures for prenatal care and delivery services for women ages 19-44 below 200% FPL who enrolled in the waiver and in LaMOMS, relative to the per capita expenditures for women who enroll only in LaMOMS.	LA
Clinical Care	
23. Assess continuity rates for women receiving family planning services	SC, AL, NC
24. Assess the number and percentage of women who receive STI screening and treatment during the initial/annual exam	SC
25. Assess delivery of care coordination services to high risk clients	AL
26. Assess content of family planning visits (via claims data) over time and across provider groups	AL
27. Qualitatively assess enrollee's use of contraceptives and barriers to use	AL
28. Assess the rate of participant women with continuous use of contraception during the year (continuous use defined as 12 consecutive months of prescribed contraception as detected through paid claims data).	NC
29. Assess the rate of participant women who use highly effective methods of contraception (limited to prescribed contraception methods detected through paid claims data)	NC
30. Clinical innovation to provide enhanced nurse counseling services to an intervention group of participants. A control group of participants receive no additional counseling. Assessing whether women in the intervention group have a higher rate of contraception use, use more effective contraception, are more satisfied with contraception method, have fewer pregnancy tests, are more likely to return for an annual exam, have fewer family planning visits and initiate fewer contraception related phone calls.	NC
Outcomes - Clinical	
31. Compare premature delivery rates for Medicaid births to women with and without FPW services	TX
32. Compare rates of low birth weight deliveries for Medicaid births to women with and without FPW services	TX

Evaluation Indicators/Topics	States
Outcomes - Fertility	
33. Assess changes in the age at first birth among women eligible for the waiver	SC
34. Assess changes in the age at first birth among women participating in the waiver	SC, AR
35. Examine the impact of secular trends in age at first birth as it applies to women participating in the waiver.	SC
36. Assess changes in the birth to conception interval among women (eligibles, participants, other Medicaid), by assessing the percent of repeat births conceived within certain intervals.	SC, IL, LA, AR, TX, NC
37. Assess birth rates to waiver enrollees and participants, comparing users of private and public providers with and without care coordination services	AL
38. Compare fertility rates among those at or below % FPL pre-waiver and post-waiver implementation (inc. ethnic groups)	IL, LA, TX
39. Assess rates of pregnancy intendedness among certain groups of women	IL, VA, NC
All Indicators – Local Area Variation	
40. GIS map of major outcomes (including enrollment, participation) by county.	SC, NC
