This report was developed by the North Carolina Health Professions Data System, Cecil G. Sheps Center for Health Services Research at the University of North Carolina at Chapel Hill. Funding for the publication of this document was provided by the North Carolina Area Health Education Centers (NC AHEC) Program and the Office of the Provost (Health Affairs), University of North Carolina at Chapel Hill.

## Introduction

This is the thirty-sixth annual report on North Carolina Health Professions, prepared using data compiled by the North Carolina Health Professions Data System (HPDS). The HPDS was developed to collect and disseminate timely and reliable data on licensed health professionals in North Carolina. Initiated in 1975 with federal funding from the National Center for Health Statistics, the HPDS was assisted in the early 1980s by a grant from the Duke Endowment through the North Carolina Hospital Association. Although selected data are available beginning in 1976, continuous and equivalent data files have been maintained since 1979. For most professions these data include name, business address, birth year, gender, race, information on basic professional education, practice specialty, activity status, form of employment, and practice setting. Special analyses and reports from all data files may be requested (*see Appendix III*).

This report draws on data compiled and maintained by the North Carolina HPDS and describes the supply and distribution in 2013 of licensed individuals in nineteen health professions by county and selected regions. The HPDS is maintained by the Program on Health Workforce Research and Policy at the Cecil G. Sheps Center for Health Services Research of the University of North Carolina at Chapel Hill. Support for the HPDS is provided by the North Carolina Area Health Education Centers (NC AHEC) Program and the University of North Carolina Office of the Provost (Health Affairs). This report would not be possible without the cooperation of the independent health professions licensing boards that provide data to the HPDS.

## Sources and Limitations of the Data

### *Source of Health Professions Data*

Data for this report are provided annually by the licensing boards for each of the following professions: certified nurse midwives, chiropractors, dental hygienists, dentists, licensed practical nurses, nurse practitioners, occupational therapists, occupational therapy assistants, optometrists, pharmacists, physical therapists, physical therapist assistants, physicians, physician assistants, podiatrists, practicing psychologists, psychological associates, registered nurses and respiratory therapists. The boards provide demographic, practice, and location information on every professional licensed to practice in the state of North Carolina. This year, and for the past thirty-five years, this report has been prepared using data current to October 31 for each year, enabling users to construct longitudinal analyses and to examine yearly changes in health professionals over time.

Physician data are derived from the NC Medical Board's licensure files. These data include physicians who are currently in postgraduate medical training programs (residencies and fellowships) and have permanent licenses. In an effort to accurately separate physicians in residency training from those who are not in residency training, listings of physicians in postgraduate medical education programs as of July 2013 were obtained from ACGME Data Resource Book, Academic Year 2013-14. These lists were compared with the NC Medical Board's licensing file. Physicians in residency training are not included in the counts by county in this publication. All resident physicians enrolled in postgraduate medical education programs were identified and are reported in Table 1. This table excludes some fellowships.

**Table 1: Number of Residents-In-Training by Sponsor Location, 2013**

| <b>Residency Program</b>   | <b>County</b> | <b>Residents</b> | <b>Percent</b> |
|--|---------------|------------------|----------------|
| Duke School of Medicine – Duke University Medical Center                   | Durham        | 889              | 28.5%          |
| University of North Carolina School of Medicine – UNC Hospitals            | Orange        | 729              | 23.4%          |
| Wake Forest School of Medicine – Baptist Medical Center                    | Forsyth       | 665              | 21.3%          |
| Brody School of Medicine, East Carolina University – Vidant Medical Center | Pitt          | 356              | 11.4%          |
| Carolinas Medical Center   | Mecklenburg   | 254              | 8.2%           |
| South East AHEC – New Hanover Regional Medical Center                      | New Hanover   | 71               | 2.3%           |
| Mountain AHEC – Mission Hospital   | Buncombe      | 57               | 1.9%           |
| Greensboro AHEC – Moses Cone Hospital                                      | Guilford      | 48               | 1.5%           |
| Cabarrus Family Medicine Residency Carolinas Medical Center-Northeast      | Cabarrus      | 26               | 0.8%           |
| Southern Regional AHEC – Cape Fear Valley Medical Center                   | Cumberland    | 21               | 0.7%           |
| <b>State Totals</b>  |               | <b>3,116</b>     | <b>100%</b>    |

Data source: ACGME Data Resource Book, Academic Year 2013-14

Beginning in 2008, data on nurse practitioners (NPs) were acquired from the NC Board of Nursing; nurse practitioner data in prior years (1979-2007) were obtained from the NC Medical Board. The NC Midwifery Joint Committee provided data on certified nurse midwives (CNMs). Data for physician assistants (PAs) are obtained from the NC Medical Board. Certified nurse midwives and nurse practitioners are included in the registered nurse (RN) counts.

### *Definitions and Limitations*

Since state law requires a license to practice in each of the included professions, the data reported here reflect an accurate record of the supply and distribution of licensed practitioners. However, due to the fact that the actual activity status of a given professional may change over time (i.e. the person may retire, move out of the state but maintain a license, or maintain a license while working in another profession), having a license does not always indicate that the individual is actively practicing. To adjust for this, the data presented in this report include only those individuals who indicated on their license registration renewal form that they were working in North Carolina and were actively engaged in the profession. Active status practitioners may include administrators, researchers and educators who are active in the profession but are not engaged in direct patient care. Active status is assigned to individuals who are newly licensed and have not reported their status. Those with unknown activity status often include newly licensed professionals who at the time of licensure had not yet secured employment in their profession. Individuals who report a business address or hours but who do not report their status are also assigned an active status.<sup>1</sup> For active professionals, individuals are assigned to their self-designated primary practice location county; if their primary practice location is unknown, their county is assigned using their mailing address. For physicians, county is derived from the physician's practice ZIP code; for all other professions, counties are self-reported by the licensee on their registration form. The nursing professions (registered nurses, certified nurse midwives, nurse practitioners, and licensed practical nurses) and the dental professions (dentists and dental hygienists) are grouped together in the region and county pages. Physicians are listed separately from other professions. The remaining professions are listed in alphabetical order.

Doctors of medicine (MDs) and doctors of osteopathy (DOs), both of whom register with the NC Medical Board, are grouped together. The physician data reported in this publication are for licensed physicians who are not currently participating in one of the postgraduate medical education programs listed in Table 1.

---

<sup>1</sup> For physical therapists, physical therapist assistants, occupational therapists and occupational therapy assistants, individuals who report that they are not actively employed in physical therapy or occupational therapy but are seeking employment in physical or occupational therapy are also considered active. These are the only professions that have data available on whether individuals are seeking employment.

Data in this report also identify physicians employed by the federal government. Physicians included in the federal category have reported that their principal employer is the federal government. These individuals may have primary practice settings in a health facility on a military installation, or in the Department of Veterans Affairs, U.S. Public Health Service, Indian Health Service, or some other other federal health program or facility. Because their practices are in community settings, all National Health Service Corps (NHSC) physicians are included in the non-federal category except for uniformed Public Health Service physicians who may be in a NHSC placement. The NC Medical Board supplied the federal physician data reported in this document. Physicians employed by the federal government and practicing in federal institutions such as the Veterans Administration or Department of Defense facilities are not required to be licensed in North Carolina, so the numbers for federal physicians reported in this publication may fall short of the actual numbers of federal physicians in the state.

Beginning in 2003, physicians indicating non-federal status were checked against their primary practice setting. Physicians who indicated non-federal status but whose primary practice address was in a military setting were reclassified as federal physicians. Federal providers are not asked to specify their specific employment setting on the annual registration renewal form; therefore, military practitioners cannot be subcategorized within the federal category.

The NC Board of Nursing requires biennial registration in the birth month for the state's registered nurses (RNs) and licensed practical nurses (LPNs) with half of the state's RNs and LPNs registering with the Board each year. Therefore, the report includes updated data on the 50% of RNs and LPNs who renewed their registration in 2013, and data for the remaining 50% who renewed their registration in their birth month of the previous year. Additionally, the NC Psychology Board requires biennial registration. Both the Board of Nursing and the Psychology Board update their data in non-renewal years to reflect address changes, new licensees and deceased practitioners.

### ***Understanding the Supply of Physicians: Classifying by Area of Practice or Specialty***

In 2011, the North Carolina Health Professions Data System (HPDS) reported that the number of primary care physicians practicing in the state dropped from 9,017 in 2010 to 7,520 in 2011 (NC HPDS 2011). This decline, the report explained, was due to a change in how each physicians' specialty was collected on the licensure renewal form by the North Carolina Medical Board. The change was intended to more accurately capture the "area of practice" in which physicians are actively practicing medicine, as opposed to the specialty in which they were trained or practiced in the past. The language on the renewal web site reads:

“An area of practice is what you primarily do as a physician. Your area of practice may correspond to an ABMS/AOA certification or generally recognized area of work, e.g. "hospitalist," "administrative medicine," "integrative medicine," "student health" and so forth. Please select all of your area(s) of practice and the designate one of them as your primary area of practice. “

This change in reporting captures the "progressive specialization" of physicians as their practice changes after residency training and during their career in response to the needs of their patients, the communities in which they practice and their individual preferences. For the first time in 2011, North Carolina physicians, both MD and DO, were asked to indicate in which of 126 areas of practice they were engaged. In prior years, they were offered a listing of specialties to choose from that was similar to the listing of specialties published by the American Medical Association and used in their Physician Masterfile® to categorize physicians. North Carolina physicians could indicate multiple specialties but, if there were more than one, they would identify the “primary specialty.”

The most immediate and concerning effect of this change to reporting area of practice was the drop in the number of physicians classified as primary care. Compared to 2010 HPDS data, the number of primary care physicians in 2011 file apparently decreased by 16.6%, and the number of physicians in other specialties increased by 17.8%. The drop in primary care was due primarily to a shift in the self-designated area of practice from internal medicine to hospitalist by 471 physicians, from family practice to hospitalist by 42 physicians, and from family practice or internal medicine to administrative medicine by 140 physicians. The number of self-designated hospitalists grew from 81 in 2010 to 581 in 2011, those indicating administrative medicine grew from 15 to 188, and "urgent care" from 5 to 105. These and other shifts made the apparent supply of primary care physicians drop precipitously from a trend that had shown steady growth over the previous two decades. This apparent trend caused some concern to outside observers. [The confusion is understandable given the shift in designation and reporting. However, to characterize the NC primary care physician supply as declining would misrepresent actual trends. There was a growth in the number of physicians-to-population between 2012 and 2013 of 1.8%, which was above the average annual physician net growth per population of 1.2% since 2001. In short, **MD growth has been twice as fast as population growth for the past decade and included in this overall growth has been an increase in the number of physicians providing primary care in the state.**]

In 2012, one year after the change had been implemented, the number of primary care physicians classified by specialty appeared to continue to decrease but only by small increments with 103 fewer family physicians and 101 fewer internists. In pediatrics, there was actually an increase of 86 general pediatricians from 2011 to 2012. For physician supply overall, there was once again a significant increase of 566 physicians in 2012, compared to the previous year.

In 2013, the apparent decreases continued with those designating family practice as their "area of practice" dropping by 400 and internal medicine, 137. The trend toward physicians who once would have reported they were in primary care selecting another area of practice continued as 1,828 practicing

physicians reported working as "Hospitalists", or in "Urgent Care", "Student Health" and "Integrative Medicine". Among those, 67% listed a primary board certification in one of the four primary care specialties. If American Board of Medical Specialty (ABMS) board certification were used to describe the primary care physician workforce in the state instead of self-reported primary area of practice, then the growth in the primary care workforce in North Carolina would have continued proportionate to overall physician growth, or even slightly faster.

If physicians continue to be identified by their self-reported area of practice as opposed to their specialty or their board certification, this will disrupt the analysis of physician supply trends in North Carolina and the U.S., especially for primary care. This disruption may cause confusion in policy discussions over the way to meet the nation's physician workforce needs. At present, there is no perfect mechanism to guide assignment of specialty and specialty groups to physicians. If primary care continues to be a designation relevant to policy – such as its use in the determination of Health Professional Shortage Areas, or eligibility for bonus payments and loan repayment support, we must carefully examine and be explicit about the taxonomy by which we classify specialties.

### ***Population Data***

The 2013 population data estimates reported in this publication were downloaded from the North Carolina Office of State Budget and Management ([http://www.osbm.state.nc.us/ncosbm/facts\\_and\\_figures/socioeconomic\\_data/population\\_estimates.shtm](http://www.osbm.state.nc.us/ncosbm/facts_and_figures/socioeconomic_data/population_estimates.shtm)). The 2013 practitioner per 10,000 population ratios were calculated using these population estimates.

### ***Demographic and Economic Data***

This publication includes additional health, vital statistics and socio-demographic data. A list of the variable names, numbers, definitions, and the source of data by variable number can be found in *Appendix II: Definition of Terms*. All data provided in this publication are also available online at <http://www.healthworkforce.unc.edu>. The infant mortality rates reported in the 2013 state totals, non-Metropolitan/Metropolitan counties, Area Health Education Centers, Health Service Areas, the Department of Environment, Health and Natural Resources, and the Perinatal Care regions are computed as a one year rate.

This publication reports the number of general hospital discharges in 2013 from acute care, short-stay hospitals by county of patient residence. Any records with DRG 795 (normal newborn delivery) were omitted. Discharges from non-acute facilities such as psychiatric, rehabilitation, long term care, and substance abuse treatment facilities were omitted.

## Summary of Trends in North Carolina Health Professional Supply

The overall number of health professionals in North Carolina grew by approximately 2.7% from November 2012 to October 2013. Table 2 summarizes the number of health professionals licensed in the past two years and the percent change in those numbers between 2013 and 2012.

**Table 2: North Carolina Health Professions Statistics, 2012 and 2013**

|                                       |                                     | Active in Profession (October)[1] |        |                |

[1] Data are for in-state professionals; includes unknown activity status.

[2] Includes federal physicians in the armed services, U.S. Public Health Service, Indian Health Service and the Department of Veterans Affairs. Federal physicians practicing in government facilities are not required to be licensed in the state and therefore these data may underestimate actual supply.

The majority of health profession groups saw small to moderate growth between 2012 and 2013. The number of physicians classified as primary care using specialty areas alone decreased 2.8% (-240). As noted earlier, this trend is related to the change to reporting area of practice, instead of than specialty. The category of “other physician specialties” (i.e. the sum total of all other specialties that were not considered primary care) increased by 9.6% (+1,379).

For other health professions, percentage increases were greatest for physician assistants (+562, 13.9%), nurse practitioners (+452, 10.7%), and occupational therapy assistants (+77, 5.9%). The 2013 data showed moderate increases in the supply of occupational therapists (+119, 4.3%), optometrists (+42, 3.9%), dental hygienists (+176, 3.2%), registered nurses (+2,389, 2.5%), physical therapist assistants (+60, 2.4%), chiropractors (+35, 2.2%), pharmacists (+211, 2.2%), dentists (+82, 1.9%), psychologists (+34, 1.6%), certified nurse midwives (+4, 1.6%), physical therapists (+63, 1.2%), and podiatrists (+3, 1.1%). A small increase occurred for licensed practical nurses (+76, 0.4%).

The two professions that experienced decreases were respiratory therapists (-184, -4.4%) and psychological associates (-9, -1.0%).

## CHANGES IN SUPPLY

### *Physicians*

The number of **physicians** licensed by the NC Medical Board between 2012 and 2013 grew 2.9% (+626), a slight increase from the rate of growth in 2011-2012 (+2.1%, +448) (Figure 2). In 2013, only two counties in the state, Tyrrell and Camden, did not have a physician reporting their primary practice location in that county. Gates, Hyde, and Warren counties all had one physician. Forty-eight counties experienced an increase in the number of physicians, fourteen had no change in supply, and thirty-eight counties lost physicians. Counties with the largest percentage growth in the supply of physicians between 2012 and 2013 included Swain (+17, +188.9%), Montgomery (+4, +66.7%), and Jones (+7, +63.6%). The largest numeric growth was observed in Mecklenburg (+183, +6.8%), Orange (+176, +13.6%), and Forsyth (+75, +4.3%) counties. The largest numeric reduction was in Cabarrus county (-27, -5.9%). Warren county appeared to have the largest percentage decrease in physicians (-1, -50.0%).

Figure 1 (*page 7*) depicts the annual growth rate of active licensed **primary care physicians**<sup>2</sup> practicing in North Carolina over the past ten years. As explained previously in the section, *Understanding the Supply of Physicians: Classifying by Area of Practice or Specialty*, the decrease in the number of primary care physicians (PCPs) should not be interpreted as an actual loss of practitioners. Rather,

---

<sup>2</sup> Primary care physicians are those who have indicated their primary area of practice as family practice, general practice, internal medicine, pediatrics, obstetrics gynecology, administrative medicine, adolescent medicine, hospice & palliative medicine, hospitalist, integrative medicine, student health, urgent care, family practice- geriatric, or geriatric.

this decrease was the result of the shift by the North Carolina Medical Board from collecting specialty to collecting primary area of practice.

*Physician Assistants, Nurse Practitioners, and Certified Nurse Midwives*

This year's 13.9% (+562) increase in **physician assistants** (PAs) marks a significant year of growth for the profession (2012 growth was 4.2%). In 2013, sixty-four counties expanded their PA supply. The largest numeric increase was in Mecklenbury county (+113, 26.3%) and the largest percent increase was in Chatham county (+8, 400%). Eighteen counties experienced no change in their PA supply and eighteen counties experienced decreases in their PA supply. Three counties had no PAs in 2013: Camden, Gates, and Tyrrell.<sup>3</sup>

The 10.7% (+452) expansion in the **nurse practitioner** (NP) numbers in 2013 marked nineteen years of annual growth. Camden, Currituck and Montgomery counties all did not have a nurse practitioner in 2013<sup>4</sup>. Gates dropped from two NPs to one in 2013, while Tyrrell county has had a single NP since 1993. In total, sixty-two counties increased their supply of NPs, twenty lost NPs, and eighteen experienced no change.

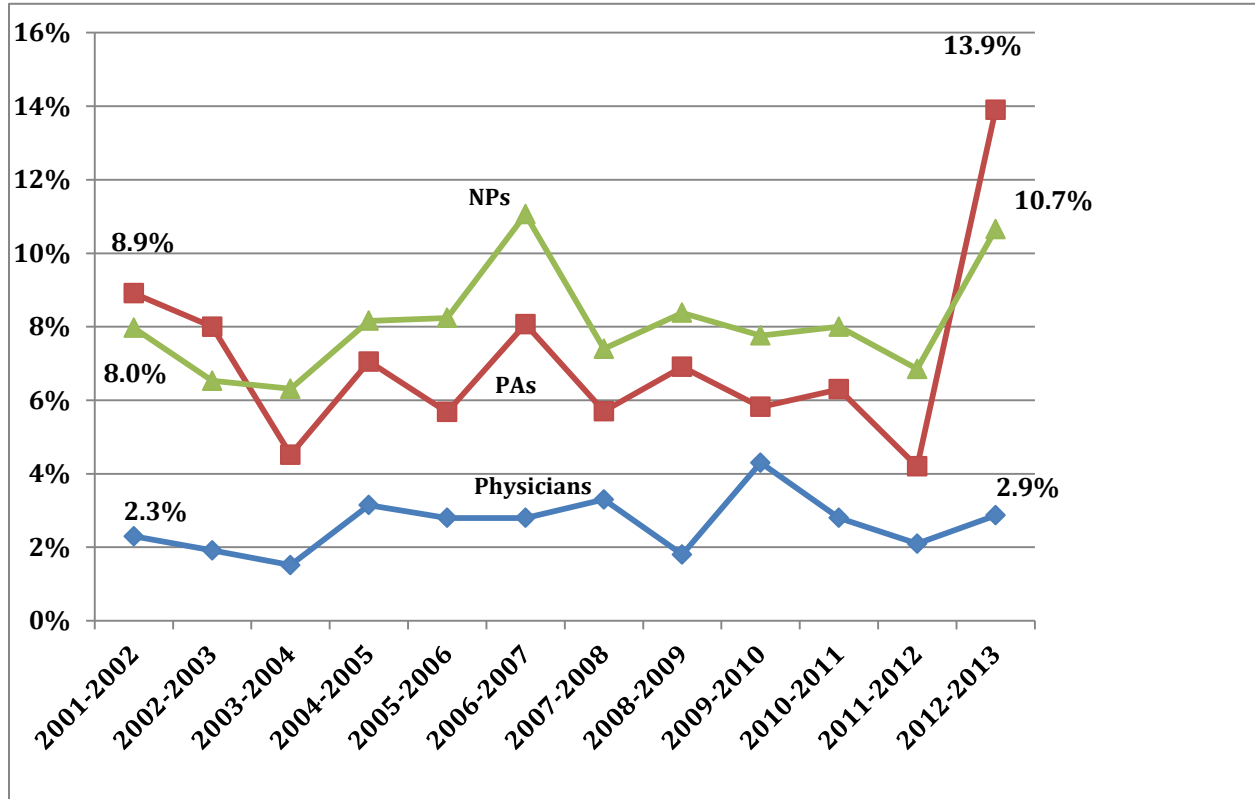

Figure 1 shows the annual growth for physicians, physician assistants (PAs), and nurse practitioners (NPs) over the past ten years. After experiencing a drop from 2001-2003, the number of PAs and NPs grew, with both professions experiencing steady rates of increase from 2003-2007. From 2008 onward, the rate of growth in the number of PAs and NPs has remained relatively steady until 2012, when both NPs and PAs showed a slight decline in annual growth. However, both PAs and NPs experienced substantial growth in 2013.

---

<sup>3</sup> Data are based on primary practice location; there may be PAs with secondary or other practice locations in these counties.

<sup>4</sup> Data are based on primary practice location; there may be NPs with secondary or other practice locations in these counties.

**Figure 1: Yearly Increases in Physicians, Physician Assistants (PAs), and Nurse Practitioners (NPs), 2001-2013**

The state’s **certified nurse midwives** (CNMs) data showed a slight increase (+4, 1.6%) in supply between 2012 and 2013. Overall, sixteen counties saw their CNM supply rise, sixty-nine experienced no change, and fifteen counties lost CNMs. Granville, Hyde, Martin, Randolph, Rutherford, and Stokes Counties each lost all their CNMs, while Duplin, Halifax, Nash, Tyrrell, and Wilson county each gained a CNM.<sup>5</sup> Forty-nine counties in North Carolina had no CNMs in 2013.

*Registered Nurses and Licensed Practical Nurses*

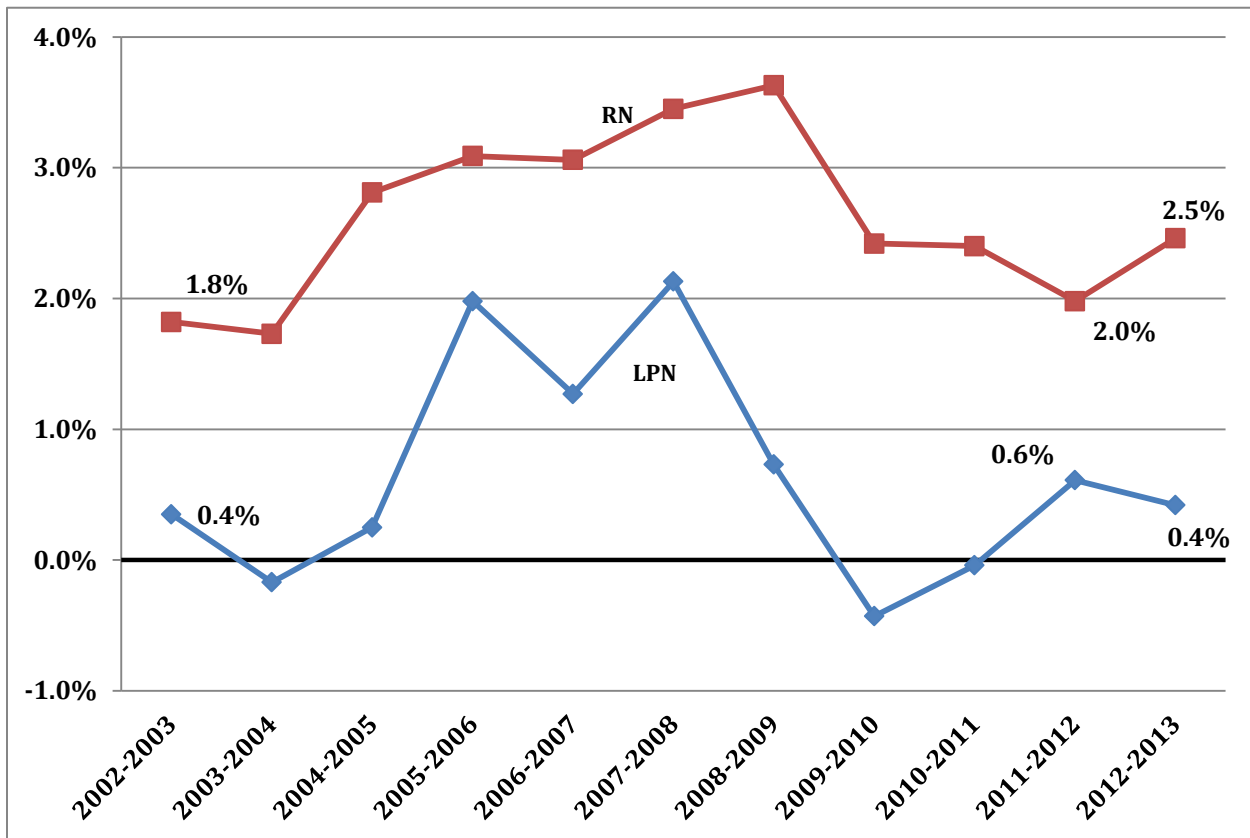

The **registered nurse** (RN) data showed a 2.5% (+2389) rise in the number of RNs in the state between 2012 and 2013 (Figure 2). Sixty-five counties expanded their RN supply in 2012, five counties had no change in their RN supply, and thirty counties experienced a loss in the number of RNs. Consistent with the past several years, Mecklenburg had the greatest number of RNs, with 11,493 active in the county. Wake county saw the largest numeric gain in RNs (+377, 3.8%), while Hyde county saw the greatest percentage gain in RNs (+4, +14.3%) Tyrrell county had the fewest number of active RNs (9), followed by Camden (16) and Perquimans (17). Perquimans county had the greatest percentage loss in RN supply between 2012 and 2013 (-12, -41.4%).

<sup>5</sup> Data are based on primary practice location; there may be CNMs with secondary or other practice locations in these counties.

The supply of **licensed practical nurses** (LPNs) increased by 0.4% (+76) between 2012 and 2013. Forty-one counties increased their numbers of LPNs, fifty-three counties lost LPNs and six counties did not show any change. Camden experienced the greatest percentage gain (+5, 166.7%) and Tyrrell had the greatest percentage loss (-1, -33.3%).

**Figure 2: Yearly Increases in Registered Nurses (RNs) and Licensed Practical Nurses (LPNs), 2002-2013**

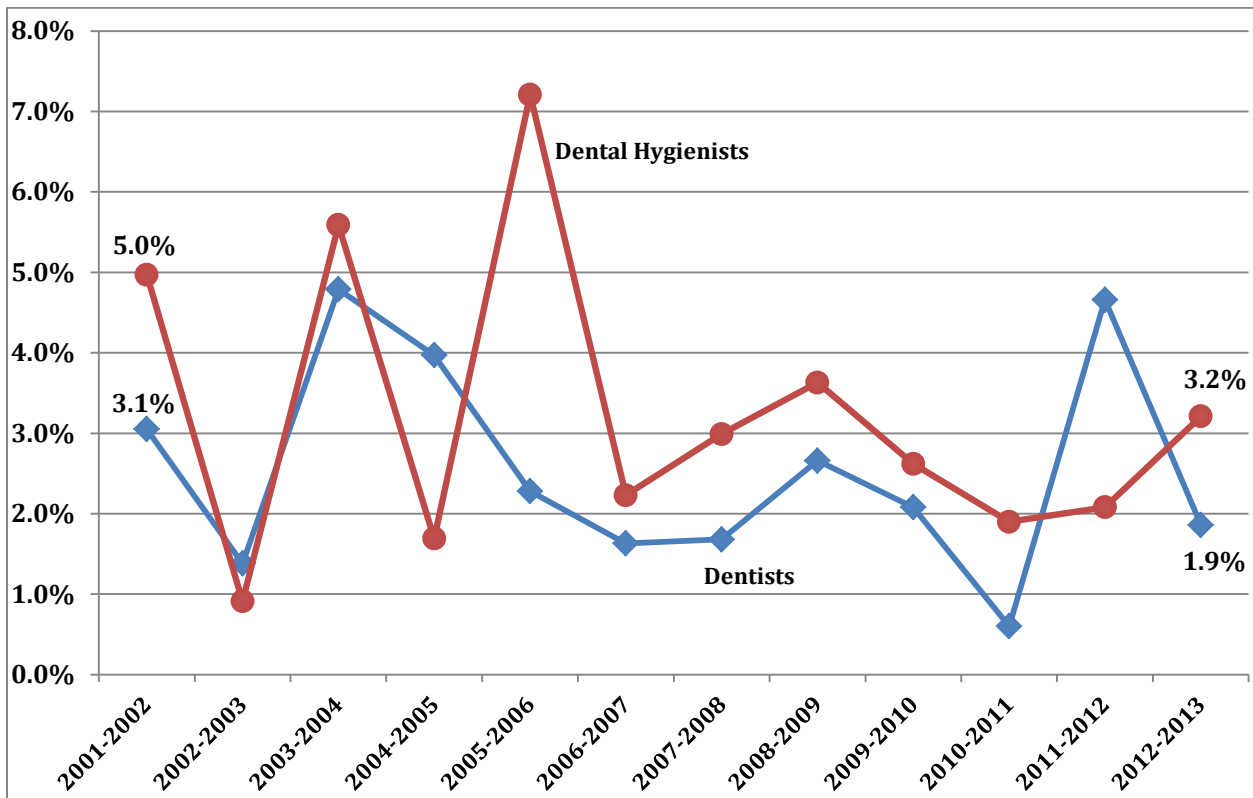

*Dentists and Dental Hygienists*

Between 2012 and 2013, North Carolina experienced a 1.9% (+82) increase in its supply of **dentists** (Figure 3). Thirty-eight counties saw an increase in their dentist supply, thirty-seven had no changes, and twenty-five lost dentists between 2012 and 2013. Camden, Hyde, and Tyrrell remained the only three counties in the state without a dentist indicating a primary practice location in one of those counties. The largest numeric increase in supply was in Wake county (+21, 3.2%). The largest numeric decrease occurred in Orange county (-6, -4.2%) while the largest percentage decrease was seen in Caswell, Chowan, and Jones (-33.3%).

In 2013, there was a 3.2% (+176) rise in the number of **dental hygienists** registered with the Board of Dental Examiners. This increase was slightly larger than the increases seen in 2012 (2.1%). Fifty-six counties showed growth in their supply of dental hygienists during 2013, while twenty-two counties

experienced a decrease. Twenty-two counties had no change in the number of hygienists in 2013. Alleghany went from no dental hygienists in 2012 to three in 2013. Davidson saw the largest numeric decrease (-8, -9.5%) while Mecklenburg county had the largest numeric increase (+23, +4.1%). There were no counties that had no active hygienists in 2013.

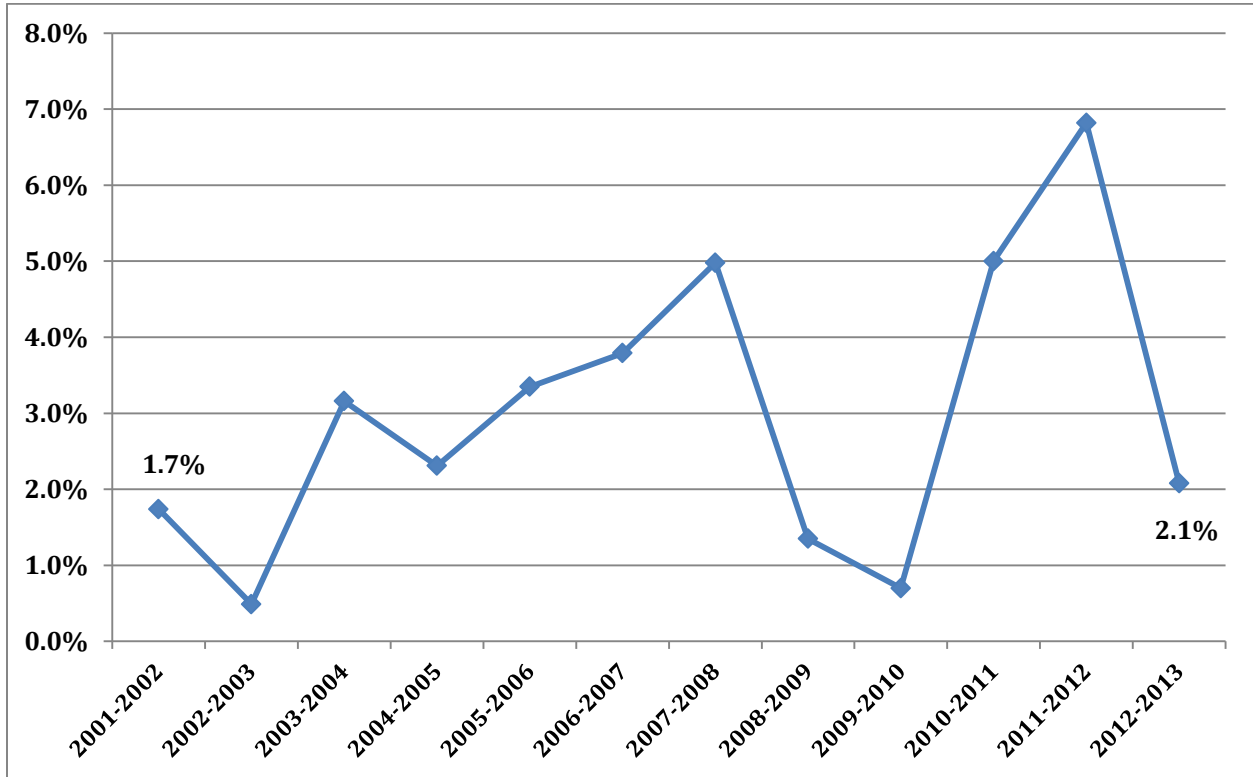

**Figure 3: Yearly Increases in Dentists and Dental Hygienists, 2001-2013**

*Pharmacists*

The total number of **licensed pharmacists** showed an increase of 2.2% (+211) between 2012 and 2013. In the 2013 file, the supply of pharmacists grew in fifty counties. Mecklenburg experienced the largest numerical increase (+53, 4.9%), while Alleghany experienced the largest percentage increase of 50% with the addition of four pharmacists. In 2013, Hyde was the only county without a pharmacist indicating a primary practice location. Thirty-nine counties lost pharmacists. The largest reduction in numbers occurred in Union (-19, -10.3%). Camden county (-1, -50%) had the largest percentage decrease in 2013. Eleven counties had no change in the number of pharmacists.

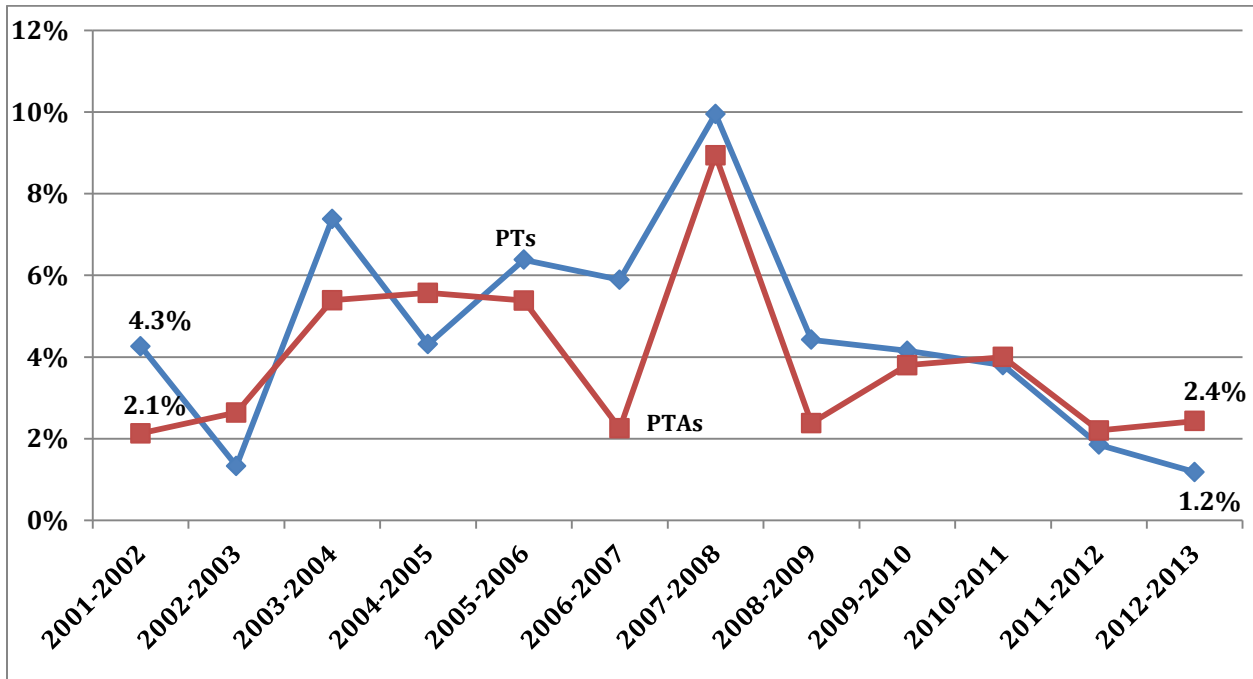

Figure 4: Yearly Increases in Pharmacists, 2001-2013

*Physical Therapists and Physical Therapist Assistants*

Between 2012 and 2013, the supply of licensed **physical therapists** (PTs) grew 1.2% (+63) (Figure 5). Fifty-five counties expanded their supply of PTs, twenty-six lost PTs, and nineteen counties had no change. The biggest percentage gain was seen in Alleghany (+2, +200%). Durham saw the highest numeric gain in PTs (+23, +6.9%). Gates, Tyrrell, and Washington were the only counties in 2013 without a PT. The number of **physical therapist assistants** (PTAs) increased 2.4% (+60) in 2013. Forty-eight counties expanded their supply of PTAs, twenty-seven lost PTAs, and twenty-five counties had no change in PTA numbers. Buncombe county experienced the largest numerical gain in PTAs (+8, +7.5%) while Catawba, New Hanover, and Pitt counties all lost the greatest number of PTAs (-8). There were three counties in 2013 that did not have an active PTA. Camden and Tyrrell were joined by Gates, who lost their only active PTA.

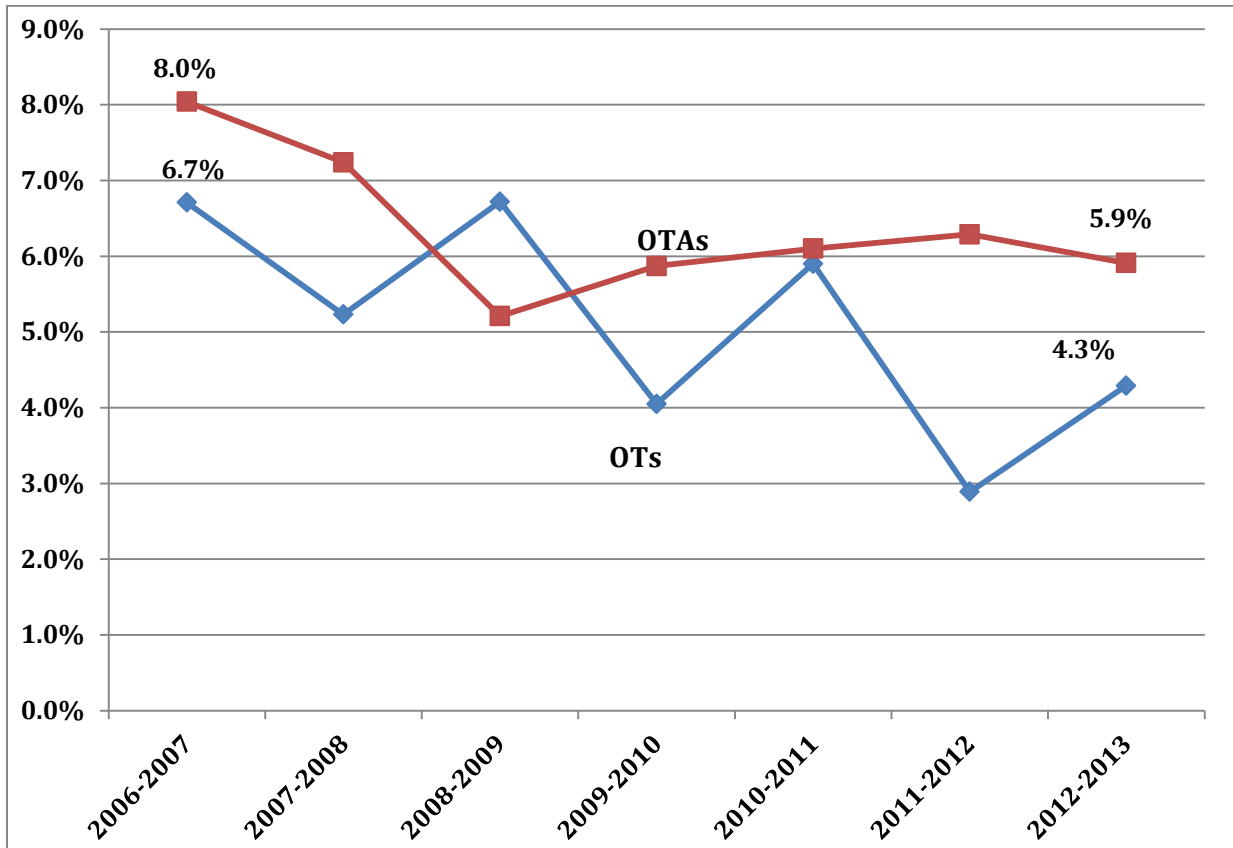

**Figure 5: Yearly Increases in Physical Therapists (PTs) and Physical Therapist Assistants (PTAs), 2001-2013**

*Occupational Therapists and Occupational Therapy Assistants*

**Occupational therapists (OTs)** experienced a 4.3% (+119) increase between 2012 and 2013 (Figure 6). Forty-five counties gained providers, thirty lost providers, and twenty-three counties experienced no change. Caswell county lost its only OTs, joining Hyde, Tyrell, and Washington counties as the only 4 counties in the state without an OT. Orange county had the greatest numeric loss (-10, -9.5%) in OT supply. Mecklenburg county had the greatest numeric gain in OTs (+37, +10.7%). In 2013, the supply of **occupational therapy assistants (OTAs)** increased by 5.9% (+77). Forty-five counties gained providers, twenty-three counties lost providers, and thirty-two counties experienced no change. Camden and Tyrrell were the only counties in 2013 without an OTA. Gates county, which had no OTAs in 2012, gained one in 2013. Avery county had the highest percentage decrease in OTA supply (-3, -75%), while Guilford county experienced the highest numeric loss (-5, -10.2%). New Hanover saw the highest numeric gain in OTAs (+17, +34%).

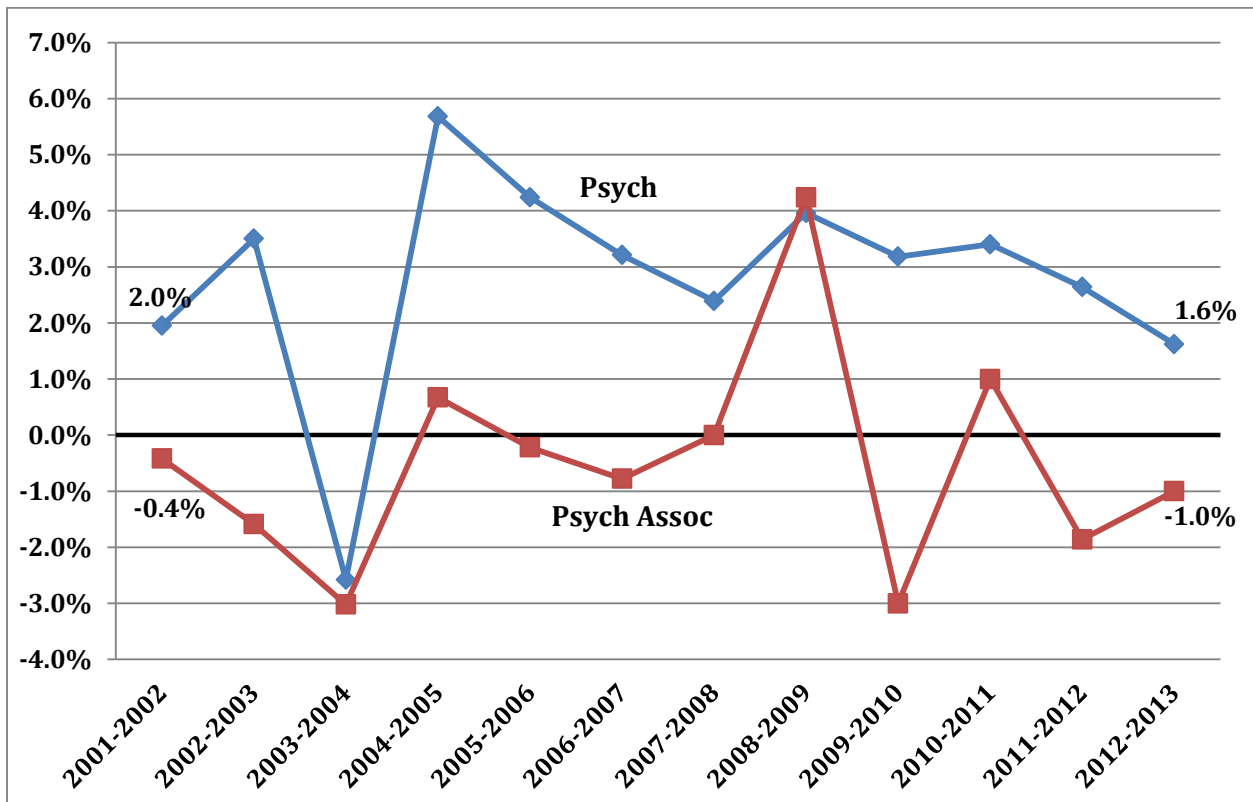

Figure 6: Yearly Increases in Occupational Therapists (OTs) and Occupational Therapy Assistants (OTAs), 2006-2013

*Psychologists and Psychological Associates*

The number of **practicing psychologists** in North Carolina increased 1.6% (+34) between 2012 and 2013 (Figure 7). Twenty-two counties did not have a practicing psychologist in 2013 and twenty counties had only one psychologist. Overall, fifteen counties lost psychologists, sixty-four counties had no change in numbers and twenty-one counties gained practicing psychologists. Between 2012 and 2013, the supply of **psychological associates** declined by 1.0% (-9). Overall, twenty-seven counties lost psychological associates, twenty-one counties gained psychological associates, and fifty-two counties saw no change. Eighteen counties had no psychological associates, two of which, (Alleghany and Person), lost their only psychological associate between 2012 and 2013. Ten counties only had one psychological associate in 2013.

Figure 7: Yearly Increases in Psychologists and Psychological Associates, 2001-2013

*Podiatrists, Optometrists and Chiropractors*

The state saw a slight increase in **podiatry** workforce supply between 2012 and 2013 (+3, +1.1%). Ten counties lost podiatrists, while seventy-nine counties saw no change in podiatrist supply. Eleven counties saw increases in podiatrists, including Chatham, Currituck, Jones, and Scotland counties, which each gained a podiatrist in 2013 after having none in 2012. Forty counties had no podiatrists in 2013 and twenty-four counties had only one.

North Carolina’s **optometrist** workforce expanded by 3.9% (+42) in 2013. Twenty-four counties gained providers, seventeen lost providers, and fifty-nine experienced no change. Twelve counties had no optometrists in 2013, although Swain county gained two providers after having none in 2012. Eleven counties had only one optometrist. Edgecombe, Hertford, and Yadkin counties all had the largest percentage gain in optometrists (+2, +100%) and Mecklenburg county gained the greatest number of optometrists (+13, +10.6%). Alamance county lost the greatest number of optometrists between 2012 and 2013 (-2, -11.1%).

The state’s **chiropractor** workforce saw an increase in supply between 2012 and 2013 (+35, +2.2%) after a slight decrease between 2011 and 2012. In 2013, thirty-two counties increased their number of

chiropractors, twenty-three lost chiropractors, and forty-five experienced no change. Twelve counties had no chiropractors, including Montgomery, which lost its sole chiropractor between 2012 and 2013. Nine counties had only one chiropractor. Avery county saw the largest percentage increase in chiropractors (+2, +200%), while Mecklenburg county had the largest numeric growth (+13, 4.4%).

#### *Respiratory Therapists*

The number of **respiratory therapists** (RTs) in North Carolina saw a decrease (-184, -4.4%) from 2012 to 2013. In 2013, twenty-two counties gained RTs, fifty-two lost RTs, and twenty-six had no change. The same fifteen counties that had no RTs in 2012 lacked an active RT in 2013. Wake county had the largest decrease in RT supply (-22, -7.7%). Hoke (+4, +100%) saw the largest percentage increase, while Hoke, Pitt, and Mecklenburg counties all saw the largest numeric increase (+4).

### **CHANGES IN PRACTITIONER TO POPULATION RATIOS**

North Carolina's population increased 1.0% between 2012 and 2013, the same growth rate seen between 2011 and 2012.<sup>6</sup> Any examination of the changes in the supply and distribution of the health care workforce must take into account North Carolina's population growth rate, as well as the differences in population growth rates across counties of the state. To account for these factors, changes in health professional supply are illustrated in this section by examining the number of health care professionals per 10,000 people.<sup>7</sup> The practitioner per 10,000 population ratio provides a better metric to compare the supply and distribution of health professionals across varying geographic areas than the use of simple raw counts. Tables 3 through 13 (except Table 5) include the ten highest and lowest ranked North Carolina counties based on active physicians, primary care physicians, registered nurses, dentists, and pharmacists per 10,000 population.

Table 5 provides the physician and primary care physician ratios per 10,000 population based on American Medical Association (AMA) data for the United States, North Carolina, and selected states that border North Carolina. Caution should be used in comparing these figures to the ratios shown elsewhere in the data book because of differences in the data collection and reporting efforts at the AMA.

Table 14 shows the practitioner per 10,000 population ratios for all North Carolina counties in alphabetical order. As in Table 3, licensed professionals for whom activity status is "unknown" are included in the "active" category. Professionals are only counted once and are located in counties based on primary practice location.

<sup>6</sup> The population change reported here was calculated using the July 1, 2012 population estimate and the July 1, 2013 provisional population estimate as reported by the Office of State Budget and Management (<http://www.osbm.state.nc.us/index.shtml>).

<sup>7</sup> Publications of this document prior to the 1999 edition reported population per health professional ratios.

*Physicians per 10,000 Population Ratio*

The 2013 ratio of North Carolina’s physicians per 10,000 population was 22.7, very similar to the 2012 ratio (22.3). The counties with the ten largest and ten smallest ratios in 2013 are included in Tables 3 and 4.

**Table 3: Counties with the Largest Physicians per 10,000 Population Ratios, 2013 vs. 2012**

| County      | 2013 |                                  |                  | 2012             |      |                                  |
|-------------|------|----------------------------------|------------------|------------------|------|----------------------------------|
|             | Rank | Physicians per 10,000 Population | Total Physicians | Total Population | Rank | Physicians per 10,000 Population |

**Table 5: Physicians & Primary Care Physicians per 10,000 Population, US and Selected States, 2012<sup>8</sup>**

| AMA Physician Data:     | United States | North Carolina | Georgia | South Carolina | Tennessee | Virginia |
|-------------------------|---------------|----------------|---------|----------------|-----------|----------|
| Total Physicians        | 26.8          | 24.9           | 21.7    | 22.3           | 26.1      | 25.8     |
| Primary Care Physicians | 7.4           | 6.8            | 6.3     | 6.5            | 7.2       | 7.4      |

According to data from the AMA and the U.S. Census Bureau, as seen in Table 5, there were, on average, about 27 physicians per 10,000 population in the United States in 2011. (The 2012 data are the most recent national data available in the Health Services and Resources Administration's 2013-2014 Area Health Resource File.) According to these data, North Carolina has 24.9 physicians per 10,000 inhabitants, slightly lower than the national average. Compared to adjacent states, North Carolina has fewer physicians per 10,000 population than Tennessee and Virginia, but more physicians per population than Georgia and South Carolina. As mentioned earlier, the county- and state-level ratios using the NC Medical Board data are difficult to compare with the AMA figures due to differences in methodology and timing of data collection and reporting. According to the national AMA data (see Table 5), there were 7.4 primary care physicians per 10,000 population in the United States in 2012 and 6.8 primary care physicians per 10,000 population in North Carolina. Tennessee and Virginia had larger numbers of primary care physicians per 10,000 population than North Carolina (with ratios of 7.2 and 7.4, respectively), and Georgia and South Carolina had smaller ratios (6.3 and 6.5, respectively).

*Primary Care Physicians per 10,000 Population Ratio*

According to NC HPDS data, there were 8.6 primary care physicians per 10,000 population in North Carolina in 2013. Tables 6 and 7 illustrate the counties with the largest and the smallest primary care physicians per 10,000 population ratios.

*Dentists per 10,000 Population Ratio*

North Carolina had 4.6 dentists per 10,000 population in 2013, slightly higher than the ratio in 2012. National statistics show a ratio of 5.8 dentists per 10,000 population for the U.S. in 2013.<sup>9</sup> Caution should be used in comparing these national figures to the ratios shown elsewhere in the book because of differences in the data collection methods of the Bureau of Labor Statistics. Tables 8 and 9 report the counties with the ten largest and ten smallest supplies of dentists per 10,000 population ratios in 2013. None of the three counties tied for 100, (Camden, Hyde, and Tyrrell) has had a dentist with a primary practice location in the county since 1989 or earlier.

*Registered Nurses per 10,000 Population Ratio*

The average number of registered nurses (RNs) per 10,000 population increased slightly from 99.5 in 2012 to 101.01 in 2013. North Carolina's supply of RNs per 10,000 population is greater than the 2013 national statistic of 91.4 RNs per 10,000 population. Caution should be used in comparing these national figures to the ratios shown elsewhere in the book because of differences in the data collection efforts of the Bureau of Labor Statistics.<sup>10</sup> Tables 10 and 11 represent the counties with the largest and the smallest ratio of registered nurses per 10,000 population in 2013.

**Table 10: Counties with the Largest Registered Nurses per 10,000 Population Ratio, 2013 vs. 2012**

*Pharmacists per 10,000 Population Ratio*

On average, the state had 10.2 licensed pharmacists per 10,000 population in 2013, a negligible change from 10.1 in 2012. The national ratio is 8.8 licensed pharmacists per 10,000 population.<sup>11</sup> Again, the reader is cautioned to use care in comparing these national figures to the ratios shown elsewhere in the data book because of differences in the data collection efforts of the Bureau of Labor Statistics. See Tables 12 and 13 for the North Carolina counties ranking the highest and lowest pharmacists to population ratios.

**Table 13: Counties with the Largest Pharmacists per 10,000 Population Ratio, 2013 vs. 2012**

## DEMOGRAPHICS

### Projected Population 2013

|                  | Total            | Ages 0-19      | Ages 20-64     | Ages 65+       |
|------------------|------------------|----------------|----------------|----------------|
| <b>White</b>     | 922,329          | 223,327        | 543,828        | 155,174        |
| <b>Nonwhite</b>  | 504,273          | 149,793        | 294,766        | 59,714         |
| <b>Total</b>     | <b>1,426,602</b> | <b>373,120</b> | <b>838,594</b> | <b>214,888</b> |
| <b>% of Pop.</b> | 100.0%           | 26.2%          | 58.8%          | 15.1%          |

### Employment and Income Data

|                            |          |
|----------------------------|----------|
| Labor Force 2013           | 647,615  |
| Employed 2013              | 586,256  |
| Unemployed 2013            | 61,366   |
| Unemployment Rate 2013 (%) | 9.5      |
| Per Capita Income 2013     | \$36,502 |
| Medicaid Eligibles 2013    | 282,847  |

## HEALTH-RELATED STATISTICS

### Vital Statistics 2013

(Rates are per 1,000 population)

|                           |        |                   |        |                      |      |
|---------------------------|--------|-------------------|--------|----------------------|------|
| Resident Births           | 18,489 | Total Pregnancies | 21,427 | Total Pregnancy Rate | 77.7 |
| Resident Deaths           | 12,961 | Teen Pregnancies  | 1,969  | Teen Pregnancy Rate  | 42.2 |
| % Births <2500 gms (2013) | 9.4    | (ages 15-19)      |        | (ages 15-19)         |      |

### Infant Mortality Rates 2013

(Rates are per 1,000 population)

|       |     |       |     |          |     |
|-------|-----|-------|-----|----------|-----|
| Total | 7.6 | White | 7.1 | Nonwhite | 8.3 |
|-------|-----|-------|-----|----------|-----|

### Hospital/Facility Data

|   |         |  |       |                            |       |
|---|---------|--|-------|----------------------------|-------|
| General Hospital Discharges 2013 <sup>+</sup> | 151,047 | General Hospital Beds 2013 <sup>++</sup> | 3,507 | Nursing Facility Beds 2013 | 6,882 |
|---|---------|--|-------|----------------------------|-------|

§ Please refer to page 4 of this book for an explanation of the change in reporting primary care physicians.

\* Numbers reported include those active within the profession and those newly licensed in 2013 with unknown activity status; inactives are excluded

\*\* Includes NC licensed federal physicians in the armed services, US Public Health Service, Indian Health Service, and the Department of Veteran Affairs.

+ Counts are for discharges of county residents from acute-care, short-stay hospitals; numbers exclude normal newborns.

++ Counts of hospital beds in acute care short stay hospitals in county.

 Produced by: Program on Health Workforce Research and Policy, Cecil G. Sheps Center for Health Services Research, University of North Carolina at Chapel Hill.

## **Appendix I: Technical Notes on Methods**

This report is based on registration data obtained on selected licensed health professional categories within North Carolina between November 1, 2012 and October 31, 2013.

Data on the licensed health professionals profiled in this report were collected from both initial and renewal licensure forms by their respective licensing boards. All boards supplied computerized copies of their files containing all necessary data to the Cecil G. Sheps Center for Health Services Research. All data files were run through a series of editing programs and procedures to check for inconsistencies.

Data were updated on a regular basis at each board with new licensees as well as changes in address. Physician data were checked and corrected for residency status using data supplied by hospitals with postgraduate medical education programs. Physicians are the only profession assigned to county location based on ZIP code information.

Counties for which teen pregnancy rates appear as an asterisk indicate that those data were suppressed by the North Carolina State Center for Health Statistics as rates based on fewer than 20 cases are considered unstable and were therefore not reported.

Population percentages appearing in the county and region pages may not add up to 100% due to rounding.

## Appendix II: Definition of Terms

### *Health Professions Related*

- 1) Active .....Licensed individuals who are currently practicing in their respective field.
- 2) Inactive .....Licensed individuals who are retired, employed in another field or otherwise not practicing in their respective field.
- 3) Unknown Activity Status .....Licensed individuals for whom practice status is not reported. Experience has shown that these usually are persons just entering their field. They are therefore considered active.
- 4) In-State .....Licensed individuals who practice in North Carolina if they are active or who reside in North Carolina if they are inactive. If business county is missing for active individuals, mailing county is used.
- 5) Out-of-State .....Licensed individuals who practice outside of North Carolina if they are active or who reside outside of North Carolina if they are inactive. If business county is missing for active individuals, mailing county is used.
- 6) Physicians .....Doctors of medicine and doctors of osteopathy licensed with the N.C. Medical Board.
- 7) Federal physician.....Physician whose primary employer is the federal government and whose principal setting of primary practice is a health facility on a military installation, in a V.A. hospital, in the Public Health Service, in the Indian Health Service, or in another federal health facility. Federally-funded primary health care clinics serving the private sector are not considered a federal facility. Federal physicians are not required to be licensed by the N.C. Medical Board. Counts include only those federal physicians who hold active licenses from the North Carolina Medical Board.
- 8) Resident physician<sup>18</sup> .....A physician who is presently enrolled in a postgraduate medical education training program at Duke University Medical Center, University of North Carolina at Chapel Hill–UNC Hospitals, East Carolina University–Pitt County Memorial Hospital, Wake Forest University Baptist Medical Center, Greensboro AHEC–Moses Cone Hospital, Charlotte AHEC–Carolinas Medical Center, South East AHEC<sup>19</sup>–New Hanover Regional Medical Center, Mountain AHEC in Asheville, Southern Regional AHEC in Fayetteville, and Cabarrus Memorial Hospital.

<sup>18</sup> Definition of the North Carolina Medical Board.

<sup>19</sup> Formerly Coastal AHEC

*Demographics*<sup>20</sup>

- 102 BIRTHS: Resident live births. Live births occurring to residents of the area during the calendar year. Data downloaded from the State Center for Health Statistics starting in 1998. Data contained in Data Book since 1998 obtained from the N.C. Office of State Budget and Management population estimates. Data through 1997 downloaded from the LINC Data System; see <http://www.linc.state.nc.us/>. Source: Department of Health and Human Services, North Carolina Public Health, State Center for Health Statistics.
- 103 DEATHS: Resident deaths. Deaths occurring to residents of the area during the calendar year. Data downloaded from the State Center for Health Statistics starting in 1998. Data contained in the 1998 Data Book obtained from the Office of State Planning population estimates. Data through 1997 downloaded from the LINC Data System; see [http://www.linc.state.nc.us](http://www.linc.state.nc.us/). Source: Department of Health and Human Services, North Carolina Public Health, State Center for Health Statistics.
- 104 LABORFORCE: Labor Force by Place of Residence. Estimates represent the sum of the average annual employed (variable 105) and unemployed (variable 106) persons by place of residence. "Place of residence" estimates were developed with data secured from establishments (i.e., place of work employment) and adjusted to remove the effects of commuting and multiple jobholding. The data through 1983 are based on the 1970 census commuting patterns through a residency adjustment. Beginning in 1984, the adjustments are based on the 1980 census commuting patterns. This variable is an annual average of monthly data for the calendar year. County level data are revised both one and two years after the reference year ends. The data are presented in unrounded form from 1986 forward to permit aggregation of county data (e.g., to the MSA or regional level), while the data for earlier years are rounded to the nearest ten, as they are in publications from the Labor Market Information Division. State level data are rounded to the nearest 100, both on LINC and in publications, and are periodically revised independent of the county revisions so that they differ significantly from the sum of counties. See also variable 201, MONTHLYLF, the monthly equivalent. 1990 to 1994 have been adjusted to the 1990 census. 1994 data are not strictly comparable to previous data due to a major revision in the Current Population Survey. For more information, call the Employment Security Commission at (919) 733-2936. Data for all years except 1999 downloaded from the LINC Data System; see <http://www.linc.state.nc.us>. Data for 1999 downloaded from: <http://www.ncesc.com>. Source: Department of Commerce.
- 105 EMPLOYED: Employment by Place of Residence. All persons who worked for pay or profit, or worked without pay for 15 hours or more per week in a family farm or business. Includes agricultural employment, nonagricultural wage and salary employment, unpaid family workers, and domestic workers in private households. "Place of residence" estimates were developed with data secured from establishments (i.e., place of work employment) and adjusted to remove the effects of commuting and multiple jobholding. This variable is an annual average of monthly data for the calendar year. County level data are revised both one and two years after the reference year ends. The data are presented in unrounded form from 1986 forward to permit aggregation of county data (e.g., to the MSA or regional level), while the data for earlier years are rounded to the nearest ten, as they are in publications from the Labor Market Information Division. State level data are rounded to the nearest 100, both on LINC and in publications, and are periodically revised independent of the county revisions so that they differ significantly from the sum of counties. 1990 to 1994 have been adjusted to the 1990 census. 1994 data are not strictly comparable to previous data due to a major redesign to the Current Population Survey. For more

- information, call the Employment Security Commission at (919) 733-2936. Data for all years except 1999 downloaded from the LINC Data System; see <http://www.linc.state.nc.us>. Source: Department of Commerce. Data for 1999 downloaded from: <http://www.ncesc.com>.
- 106 UNEMPLOYED: Unemployment by Place of Residence. This variable is an annual average of monthly data for the calendar year and is the estimated number of residents who did not work at all during the month but were able, available and looking for work. Includes all jobless persons looking for work, regardless of whether or not they qualify for unemployment insurance benefits. County level data are revised both one and two years after the reference year ends. The data are presented in unrounded form from 1986 forward to permit aggregation of county data (e.g., to the MSA or regional level), while the data for earlier years are rounded to the nearest ten, as they are in publications from the Labor Market Information Division. State level data are rounded to the nearest 100, both on LINC and in publications, and are periodically revised independent of the county revisions so that they differ significantly from the sum of counties. 1990 to 1994 have been adjusted to the 1990 census. 1994 data are not strictly comparable to previous data due to a major redesign to the Current Population Survey. For more information, call the Employment Security Commission at (919) 733-2936. Data for all years except 1999 downloaded from the LINC Data System; see <http://www.linc.state.nc.us>. Source: Department of Commerce. Data for 1999 downloaded from: <http://www.ncesc.com>.
- 107 UNEMPRATE: Unemployment Rate by Place of Residence. The average annual number of unemployed (variable 106) as a percentage of the average annual civilian labor force (variable 104). County level data are revised both one and two years after the reference year ends. State level may be revised at other times as well. Prior to 1986, the rate is based on unemployment and labor force figures which have been rounded to the nearest 10 (nearest 100 for the state), as is the case in publications from the Labor Market Information Division. The purpose of this rounding is to emphasize the fact that the numbers are estimates. Beginning with 1986, the numbers are unrounded, to permit aggregation to the MSA or regional level; the unemployment rate is based on these unrounded numbers, and hence may differ slightly in some cases from the published rates. This variable is derived from variables 104 and 106 by the formula  $100 * V106 / V104$ . 1990 to 1994 have been adjusted to the 1990 census. 1994 data are not strictly comparable to previous data due to a major redesign to the Current Population Survey. For more information, call the Employment Security Commission at (919) 733-2936. Data for all years except 1999 downloaded from the LINC Data System; see <http://www.linc.state.nc.us>. Source: Department of Commerce. Data for 1999 downloaded from: <http://www.ncesc.com>.
- 136 INFANTDEATHS: Infant deaths. An infant death is defined as death of a live born infant under one year of age. The infant death rate is defined as resident infant deaths per 1,000 resident live births for the calendar year, which can be computed as variable 136 divided by variable 102, multiplied by 1,000. Source: Department of Health and Human Services, North Carolina Public Health, State Center for Health Statistics. Data appearing in the 2006 county profiles for infant mortality rate were mislabeled and were, in fact, 2005 figures.
- 501 PREGNANCIES: Pregnancies for females, all ages. The total number of the following events during the calendar year to resident women of all ages: live births, fetal deaths of 20 or more weeks gestation and induced abortions. Stillbirths of less than 20 weeks gestation are not included in this count. These figures are generated by adding data from birth certificates, fetal death certificates, and induced abortion reports from abortion providers. The sum of the counties does not always equal data for the state since the state includes persons whose county of residence is unknown. Source: Department of Health and Human Services, North Carolina Public Health, State Center for Health Statistics.
- NA PREGNANCY RATE: Pregnancy rates are created by dividing pregnancies by female population ages 15-44 and multiplying by 1,000. This yields pregnancy rate per 1,000 women of childbearing

- age. Source: Department of Health and Human Services, North Carolina Public Health, State Center for Health Statistics.
- 502 PREGTEEN: Pregnancies for females 15-19. The total number of the following events during the calendar year to resident women ages 15-19: live births, fetal deaths of 20 or more weeks gestation and induced abortions. Stillbirths of less than 20 weeks gestation are not included in this count. These figures are generated by adding data from birth certificates, fetal death certificates, and induced abortion reports from abortion providers. The sum of the counties does not always equal data for the state since the state includes persons whose county of residence is unknown. Source: Department of Health and Human Services, North Carolina Public Health, State Center for Health Statistics.
- NA TEEN PREGNANCY RATES (15-19): Pregnancy rates are created by dividing the number of teen pregnancies by female population ages 15-19 and multiplying by 1,000. This yields pregnancy rate per 1,000 women of this age group. Note that as of 2011, the North Carolina State Center for Health Statistics no longer reports teen pregnancy rates for counties with less than 20 reported pregnancies. Source: Department of Health and Human Services, North Carolina Public Health, State Center for Health Statistics.
- 512 HOSPDISCH: General Hospital Discharges. Discharges of residents of the county in all short stay, acute care general hospitals in the state during the federal fiscal year. Excluded are federal and state hospitals, with the exception of one state facility which is included, UNC Hospitals, in Orange County. Normal ("well") newborn babies are excluded. Counties which border other states reflect under-reporting of discharges since only discharges to residents of the county from hospitals in North Carolina are counted. Counties affected are mainly Alleghany, Camden, Caswell, Cherokee, Clay, Columbus, Currituck, Dare, Gates, Hertford, Pasquotank, and Perquimans. See HOSPBEDGEN for beds included in short-stay, acute care, and general hospitals. Source: Department of Insurance. Compiled by the Cecil G. Sheps Center for Health Services Research for 1999, up to 1994, and since 2005; in 1997 and 1998, Department of Health and Human Services, Division of Health Service Regulation<sup>21</sup>; 1999 to 2005 data downloaded from LINC Data System; see <http://www.linc.state.nc.us>.
- 513 LONGTERMCARE: Nursing facility beds. This count includes beds licensed as nursing facility beds, meaning those offering a level of care less than that offered in an acute care hospital, but providing licensed nursing coverage 24 hours a day, seven days a week. In addition to these beds, licensed long-term nursing care (extended nursing care) beds in non-federal, non-state general hospitals are included. Data for each county represent the sum of the beds in the facilities located in that county. Data for the state reflect the sum of licensed beds in the counties. Long-term nursing care beds in both nursing facilities and hospitals are licensed annually for the calendar year. Source: State Medical Facilities Plan, Department of Health and Human Services, Division of Health Service Regulation; see <http://www.dhhs.state.nc.us/dhsr/ncsmfp/index.html>.
- 523 BIRTHLOWWT: Low-weight births under 2500 grams. Newborns weighing less than 2500 grams (5 pounds, 8 ounces) at birth, regardless of length of gestation, as reported on the birth certificate for the calendar year, to mothers who are residents. Low-weight births are at increased risk of infant death and illness. The term premature is used in a number of publications. Source: Department of Health and Human Services, North Carolina Public Health, State Center for Health Statistics.
- 524 HOSPBEDGEN: Beds in general hospitals. Defined as "beds in use" in hospitals, which are

---

<sup>21</sup> Formerly named Division of Facility Services.

designated for short-stay use as licensed at the end of the third calendar quarter of the year. Included are beds for general medical or surgical use, beds that are for general psychiatric disorders, rehabilitation beds, eye-ear-nose-and-throat beds and pulmonary disease beds. Excluded are beds in all federal hospitals and state hospitals. An exception is the inclusion of beds in one state facility, UNC Hospitals, in Orange County. Data for each county represent the sum of the beds in the general hospitals located in that county. Data for the state reflect the sum of beds in the counties. Prior to 2008, data for general hospital beds were reported for the current year; however, it was discovered that the data were actually effective the year before (e.g., data reported as 2007 were effective 2006). Data Book editions 2008 and after will reflect the number of hospital beds for that year (e.g., 2008) unless otherwise noted. Source: State Medical Facilities Plan, Department of Health and Human Services, Division of Health Service Regulation; see <http://www.dhhs.state.nc.us/dhsr/ncsmfp/index.html>.

- 710 MEDICAID: Count of Medicaid eligibles. An eligible is defined as a person who receives a Medicaid ID card authorizing Medicaid coverage for any portion of the state fiscal year. An eligible is counted in each county of residence during the fiscal year. The sum of the counties does not equal the state total since eligibles are unduplicated with respect to the state for the fiscal year. Data for 2005 and previous editions represented an unduplicated count for the state and counties. Data appearing in 2005 for Medicaid eligibles were mislabeled as 2004 and were, in fact, 2005 figures. Data received directly via data request from the Division of Medical Assistance; see <http://www.dhhs.state.nc.us/dma>. Source: Division of Medical Assistance, Department of Health and Human Services.
- 3001 PERSINC: Total personal income by place of residence (000s). The income received by, or on behalf of, all the residents of the area. Includes income received by persons from all sources - from participation in production, from transfer payments, from government and business, and from government interest (which is treated like a transfer payment). Personal income is the sum of wage and salary disbursements, other labor income, proprietors' income with inventory valuation and capital consumption adjustments, rental income of persons with capital consumption adjustment, personal dividend income, personal interest income, and transfer payments, less personal contributions for social insurance. For counting income, persons are defined as individuals, nonprofit institutions, private non-insured welfare funds, and private trust funds. The last three are referred to as "quasi-individuals." Proprietors' income is treated in its entirety as received by individuals. Life insurance carriers and private non-insured pension funds are not counted as persons, but their saving is credited to persons. Personal income is entirely different from money income, which is the measure of income used by Census and CPS. Source: Department of Commerce, Bureau of Economic Analysis. Data for 1996 through 1999 and 2003 editions downloaded from Bureau of Economic Analysis at <http://www.bea.doc.gov/>. Data for all other years downloaded from the LINC Data System; see <http://www.linc.state.nc.us>.
- 3004 BEAPOP: Population estimate by place of residence (BEA denominator). BEA uses the U.S. Census Bureau county population totals as of July 1. Population is measured at midyear, whereas income is measured as a flow over the year. The state population figure used by BEA will agree with the the U.S. Census Bureau county estimates but may not be the most current state level figure released by the Census Bureau. These population figures should be used only with BEA income figures to calculate per capita estimates. Source: Department of Commerce, Bureau of Economic Analysis. Data for 1996 through 1999 and 2003 editions downloaded from Bureau of Economic Analysis at <http://www.bea.doc.gov/>. Data for all other years downloaded from the LINC Data System; see <http://www.linc.state.nc.us>.

- 3005 PERCAPINC: Per capita income by place of residence. The total personal income of residents of an area divided by the resident population of the area. See BEAPOP and PERSINC. Per capita personal income serves as an indicator of the quality of consumer markets and of the economic well-being of the residents of an area. It should be used with caution for several reasons: (1) An unusually high or low per capita income may be the temporary result of unusual conditions such as a bumper crop, a major construction project, or a catastrophe. In some cases, a high per capita income is not representative of the standard of living in an area. Conversely a county with a large institutional population may show an unusually low per capita income. (2) Population is measured at mid-year and income is measured as a flow over the year, so a significant change in population during the year could cause a distortion in the per capita figures. (3) Farm proprietors' income reflects return from current production; it does not measure current cash flows. Sales out of inventories, though included in current gross farm income, are excluded from net farm income because they represent income from a previous year's production. Additions to inventories are included in net farm income at current market prices. (4) In counties that are characterized by small population and almost total dependence upon farming, the per capita income will react more sharply to the vagaries in weather, world market demand, and changing government policies related to agriculture than in counties where the sources of income are more diversified. (5) Substantial differences between BEA estimates of per capita income and Census Bureau estimates are due to differences in definition of income, collection mode, and method of computation. The BEA data are derived primarily from administrative records, while the census data are self reports of individuals. This variable is derived from variables 3001 and 3004 as  $1000 * V3001 / V3004$ . Data for 1996 through 1999 and 2003 editions downloaded from Bureau of Economic Analysis at <http://www.bea.doc.gov>. Data for all other years downloaded from the LINC Data System; see <http://www.linc.state.nc.us>. Source: Department of Commerce, Bureau of Economic Analysis.
- 5001 POPULATION (Census/Estimate/Projection). Depending on the year, this is the corrected census count (April 1, 1970, 1980, 1990 or 2000), or the estimate or projection from the State Demographer (April 1, 2000, 2010; July 1, other years). All years subsequent are projected. A projection differs from an estimate in that it relies on certain assumptions about long-term trends in data, which are not yet available, while an estimate is always based on data from predictor variables, which are available for the estimate year. See variables 401-424 for age/race/sex breakdown of the same data for counties (available through the "Population by age/race/sex" topic report option on the main menu). The sum of variables 401-424 for 1990 will not equal variable 5001 for the counties of Buncombe, Cleveland, Durham, Mecklenburg, Pitt and Robeson because the corrections were released after the 1990 data were adjusted. Several municipalities, counties, and the state had corrections to the 1990 population from the Census Bureau. Data for 1997 through 2000 and the 2003 editions downloaded from the Office of State Planning. Population data for age/race/sex breakdowns were not available for the 2011 Data Book publication and 2009 population data were used for these variables instead. However, county and state level projections of total population were available for 2011, and were used to calculate all practitioner to population ratios in the 2011 edition. Data for all other years downloaded from the LINC Data System; see <http://www.linc.state.nc.us>. Source: N.C. Office of State Budget and Management.

## **Appendix III: Procedures for Requesting Additional Information**

### *Procedures for Requesting Additional Information*

This appendix describes the health professions information available through the North Carolina Health Professions Data System at the Cecil G. Sheps Center for Health Services Research and the necessary procedures for obtaining data.

The Sheps Center maintains health professions data files through a cooperative effort with each licensing board for the following categories of health professionals licensed in North Carolina:

- Certified Nurse Midwives
- Chiropractors
- Dental Hygienists
- Dentists
- Nurses (RNs and LPNs)
- Nurse Practitioners
- Occupational Therapists
- Occupational Therapy Assistants
- Optometrists
- Pharmacists
- Physical Therapists
- Physical Therapist Assistants
- Physicians, includes MDs and DOs licensed by the North Carolina Medical Board
- Physicians in Residency Training
- Physician Assistants
- Podiatrists
- Practicing Psychologists
- Psychological Associates
- Respiratory Therapists

Although the Sheps Center does have files for each year since 1975<sup>25</sup>, the data prior to 1979 are relatively inaccurate, and therefore their use is discouraged.

---

<sup>25</sup> Certified nurse midwife data are available starting from 1985; respiratory therapist data are available starting from 2004. Occupational therapist and occupational therapy assistant data are available starting from 2006.

Health professionals provide the data to the respective licensing boards at the time of initial license or renewal. The data are tabulated by the Sheps Center, but at all times remain the property of the boards. The data are confidential because they include detailed information on the individuals licensed. Therefore, any requests for names, addresses, or other information that would lead to identification of any individuals cannot be honored without the prior written approval of the appropriate licensing board.

Data are provided in several formats: electronic mailing lists, cross-tabulations, frequencies and graphic representations. A two-week interval is normally required to process data requests, with a minimum charge dependent upon the type of output. Please visit the Health Professions Data System web site at <http://www.shepscenter.unc.edu/hp> for more information.

When board approval is necessary, the following steps should be taken:

1. Contact the Sheps Center's N.C. Health Profession Data System Coordinator by phone (919) 966-7112, email ([nchp@unc.edu](mailto:nchp@unc.edu)) or letter to discuss the details or your request. Direct verbal or written approval from the executive officer of the appropriate board is required before any data can be released by the Sheps Center.
2. A written request should be sent to the executive officer of the appropriate board (see list on following pages) explaining the need for the data in question, and the preferred format of the data. If the data are for an announcement or a survey, a copy of the brochure or questionnaire to be sent is usually helpful. The letter should request that approval be granted to the Sheps Center to provide the data. Sending a copy of the letter to the Sheps Center Coordinator is recommended.

Board approval is normally not required if the data requested do not identify individuals. For requests of this type only a letter, email or telephone call to the Coordinator is required. A phone call is helpful to ensure that your request is clear.

If data are required immediately, the request should indicate the urgency. An urgent request will be processed as soon as it can be scheduled into the workload, and an additional charge will be assessed. However, no assurance can be given as to delivery date earlier than two weeks after the request has been received. Whenever possible, a two-week interval should be anticipated for the processing of routine requests; a longer period will be required if extensive programming is needed.

#### *Addresses of Health Professions Licensing Boards*

N.C. Board of Chiropractic Examiners  
 174 Church Street  
 Concord, NC 28025-4759  
 Ms. Carol Hall, Executive Secretary  
 (704) 793-1342  
 FAX (704) 793-1385  
 Email: [carolhall@ctc.net](mailto:carolhall@ctc.net)  
[www.ncchiroboard.com](http://www.ncchiroboard.com)

N.C. Midwifery Joint Committee  
 PO Box 2129  
 Raleigh, NC 27602-2129  
 Ms. Elizabeth Korb  
 (919) 782-3211  
 FAX (919) 781-9461  
 Email: [email@ncbon.com](mailto:email@ncbon.com)  
[www.ncbon.com](http://www.ncbon.com)

N.C. State Board of Dental Examiners  
 507 Airport Boulevard, Suite 105  
 Morrisville, NC 27560-8200  
 Mr. Bobby D. White, Chief Operations Officer  
 (919) 678-8223  
 FAX (919) 678-8472  
 Email: [info@ncdentalboard.org](mailto:info@ncdentalboard.org)  
[www.ncdentalboard.org](http://www.ncdentalboard.org)

N.C. State Board of Optometry  
 109 North Graham Street  
 Wallace, NC 28466-2713  
 Dr. John Robinson, Executive Director  
 (910) 285-3160 or 1-800-426-4457 (in-state)  
 FAX: (910) 285-4546  
 Email: [info@ncoptometry.org](mailto:info@ncoptometry.org)  
[www.ncoptometry.org](http://www.ncoptometry.org)

N.C. Board of Pharmacy  
 PO Box 4560  
 Chapel Hill, NC 27515-4560  
 Mr. Jay Campbell, Executive Director  
 (919) 246-1050  
 FAX: (919) 246-1056  
[www.ncbop.org](http://www.ncbop.org)

N.C. Board of Physical Therapy Examiners  
 18 West Colony Place, Suite 140  
 Durham, NC 27705-5582  
 Mr. Ben F. Massey, Jr., PT, Executive Director  
 (919) 490-6393 or 1-800-800-8982 (in-state)  
 FAX: (919) 490-5106  
 Email: [ncptboard@mindspring.com](mailto:ncptboard@mindspring.com)
