# Methods

These figures show the age-adjusted mortality rate for eight health conditions from 2015 to 2019 in the U.S. Delta Region states. The eight states in this region are Alabama, Arkansas, Illinois, Kentucky, Louisiana, Mississippi, Missouri, and Tennessee. We analyzed data for the following conditions: bladder cancer, breast cancer, colorectal cancer, kidney cancer, lung cancer, skin cancer, prostate cancer, and major cardiovascular disease. The figures are stratified by race/ethnicity and rurality. We used the following race/ethnicity categories: Black or African American, White, Asian or Pacific Islander, American Indian or Alaska Native, Hispanic or Latino, and Not Hispanic or Latino. Metro included areas classified as Large Central Metro, Large Fringe Metro, Medium Metro, or Small Metro. Non-metro included areas classified as Metropolitan or Non-Core. Searches were conducted by stratifying each condition by state and race or ethnicity. Race (Black, White, Asian/PI, and AI/AN) and ethnicity (Hispanic and Not Hispanic) were searched separately. Data representing fewer than ten people are suppressed. Data representing fewer than 20 people are marked as unreliable and thus not presented here. All data were retrieved from the Centers for Disease Control and Prevention (CDC) WONDER database.

**Data Source:** Centers for Disease Control and Prevention, National Center for Health Statistics. Underlying Cause of Death 1999-2019 on CDC WONDER Online Database, released in 2020. Data are from the Multiple Cause of Death Files, 1999-2019, as compiled from data provided by the 57 vital statistics jurisdictions through the Vital Statistics Cooperative Program. Accessed at <http://wonder.cdc.gov/ucd-icd10.html> on May 28, 2021, 11:04:58 AM.
